### Description

## Robot Coupe MP450 Turbo 18" Single Speed Immersion Blender - Just needs blade

Processing food needs to be efficient, so boost the efficiency in your commercial kitchen by using the Turbo 18" immersion blender! Whether preparing soups, sauces, or other blended foods, this blender is perfect for the job with its 1 1/10 hp motor and sharp, removable blades. Plus, when finished with the task, the unit is easy to clean, meaning that you can quickly move on to the next step!

This Turbo blender's 18" shaft is great for liquefying, pureeing, and blending to make delicious soups, sauces, pates, and other delicious dishes. Such versatility helps to reduce the need for other equipment, helping you save space and money.

This unit boasts a 1 1/10 hp motor with speed self-regulation system to achieve great results each time. It operates up to 12,000 RPM and requires a 120V electrical connection for operation.

When the blending job is too long for you to stand by the blender during operation, simply press the locking button! This feature enables continuous operation so you can simultaneously blend and tend to another task to save time. For comfort during operation, an ergonomic handle reduces fatigue, meaning that you can use the blender longer and process food more efficiently.

The stainless steel bell and blade assembly easily disassemble for cleaning, while gears are housed in an all metal gear box for longevity. Also, replacing the power cord if it becomes worn or frayed isn't a problem because it was engineered to easily detach from the unit.

**Quantity:** 1
